## EXPERIENCE THE FUTURE OF HYDRAULIC FRACTURING WITH FRACLOCK TECHNOLOGIES

# FRACLOCK

The FracLock System combines cutting-edge technology with the reliability and quality that you expect from an industry-leading manufacturer. Our focus on **safety, efficiency,** and **cost savings** sets us apart. No longer will well service companies and operators be faced with the dangerous and time-consuming challenges of traditional well operations.

### Other benefits include:

- Limits danger zone exposure
- 24% Lower completions cost
- Capable of 130 bpm fluid transfer
- Well pressure monitoring system prevents unlocking while well pressure is indicated
- Digital touch screen gives easy access to critical information

## > COMPARISON

### FracLock:

- Fixed rate for recertification and repairs.
- Less mechanical exposure.
- Fewer torqued connections result in fewer leak potential.
- Reduced risk of shearing cables during well operations.
- Single equipment contact for organized deployment.
- Continuation of work in case of required coiled tubing work.
- No excessive grease necessary to properly seal redundant equipment.

### Zipper Manifolds:

- Variable and unpredictable cost for redress and repairs far past utilization.
- Requires operators to have frequent contact with equipment.
- Additional equipment increases potential leaking points.
- Accidental valve closures damage or cut wireline during operations.
- Fragmented supplier schedule makes scheduling more difficult.
- If coiled tubing is needed, operations must shut down completely.
- Costly and excessive grease required to properly seal equipment.
